

Second demo

Due Mar 9 by 10am **Points** 25

These are the requirements for the second demo:

Rest API that can handle any structured data in Json

Rest API with support for crud operations, including merge/Patch support, delete

Rest API with support for validation

Json Schema describing the data model for the use case

Advanced semantics with rest API operations such as update if not changed; conditional read and conditional write

Storage of data in key/value store

Security mechanism must use RS 256
